PRODUCT OVERVIEW

MWOCP67-5500-B-RM is a highly efficient (peak 97.5%), ORV3 5,500 W front-end power supply module featuring a 50.0 Vdc main output. The 50.0 V main output provides active current sharing together with output droop control for up to 33.0 kW (27.5 kW in N+1 configuration) when deployed in Open Compute compliant shelves from Murata. This power supply module can be hot plugged, recovers from over temperature faults, and provides hardware status LEDs and signals. PMBus™ 1.2 digital communication capability, the low profile 1U package and 52.6 W/in^3 power density make this power and rack solution ideal for delivering reliable power to OCP open rack architecture or stand-alone applications.

[1]Short circuit protection is realized by CC mode + undervoltage protection.
[2]Repetitive over current with different duty cycle is limited by thermal performance and may be protected by OTP.
*Short circuit / OCP condition would cause PSU bounce 1 time with 5 seconds re-try delay time then latch off if fault retained.
*PSU under OCP conditions or other fault conditions will with shutdown.
